SUMMARY

I'm an iOS and Android developer at Lumens Technologies in Mumbai. For five years I've built Plexilent, a smart-lighting app, from its first prototype to what's on the App Store and Google Play today, and since August 2025 I've led the team behind it. I design the screens, write the native code for phones, tablets and watches, and build the cloud pieces underneath. What I enjoy most is taking a complicated product apart and rebuilding it so simple that anyone can use it.

HIGHLIGHTS

- Built Plexilent for iPhone, iPad, Android, Apple Watch and Wear OS, in 16 languages. 4,190+ commits since July 2022, 99% of the repo.
- One codebase now ships 10+ brand apps, including Uniflow, Galaxxy Hub (Kolors), Salt, Bajaj Illumiga and Corvi. Adding a new brand takes about a day.
- Fixed how phones share a home. Sharing used to hand out stale copies, and phones clashed on addresses. I moved each network into the cloud with a version number and gave every phone its own identity. Joining is still one QR scan, no sign-up.
- Replaced the usual MQTT broker with an ESP32-C3 gateway that listens to Firebase. It costs almost nothing for a few homes. The Alexa skill is live; Google Home, SmartThings, Home Assistant and IFTTT are in review.
- Made it faster and steadier: Android mesh switching went from 59 s to 5 s, a 265-device network that showed 264 devices offline now reports correctly, and the top iOS crash is gone.
- Also built a CCTV viewer, a sensor suite, Bulk OTA with Live Activity, Siri in Hindi, Gemini AppFunctions, a Home Assistant library on PyPI, and a web app that turns PDF floor plans into 3D maps.
- I pair-program with Claude, and I review, test and own every change.

APPS & PROJECTS

- **Plexilent**: iPhone, iPad, Android phones & tablets, Apple Watch, Wear OS · App Store · Google Play · videos
- **Brand apps:** Uniflow World, Galaxxy Hub, Salt, Bajaj Illumiga, Bajaj Synchronous, Crompton SENZE SDK
- **Smart Street Pole EV Charger**: Android app + charger firmware · demo video

EXPERIENCE

Team Lead – IoT Applications

Lumens Technologies (Plexilent) · Thane · Aug 2025 – present

- Built a gateway without an MQTT broker: commands flow through the Realtime Database to an ESP32-C3 gateway. Almost free for a few users and cost-effective as users grow.
- Built Google Home, Alexa and SmartThings integrations with OAuth account linking; Alexa skills live for Plexilent and Uniflow, Google Home and SmartThings in certification.
- Wrote the Cloud Functions behind the whole gateway project and connected them to every app.
- Siri Shortcuts integration (12 App Intents), so the iOS Shortcuts app can run automations.
- iPad app, plus the same tablet experience on Android.
- Merged two separate BLE stacks (BLE Mesh and beacon) into one app, on shared sync infrastructure.
- Widgets and watch apps for more granular control.
- Merged multiple white-label apps into one structure: easier codebase management, faster releases.

Senior Application Engineer

Lumens Technologies · Apr 2023 – Aug 2025

- Directed the complete redesign of the Plexilent app UI to modern standards.
- Built the app architecture for networks of 6,000+ nodes.
- Bridged Objective-C and Swift on iOS and built reusable UI libraries.

- Mentored three junior engineers.
- Built Camera2-based QR scanning on Android.
- Designed Human-Centric Lighting, dynamic scheduling and effects features.
- Managed 10+ exhibitions and secured 8 B2B partnerships.
- Managed design, maintenance and security of 6+ company websites (plexilent.com, colossusworld.com, evertstar.in); mitigated DDoS and WordPress attacks; 99.9% uptime.
- "Above and Beyond" award.

Executive – New Product Development

Lumens Technologies · Apr 2022 – May 2023

- Led full lifecycle development of the Plexilent apps: first Google Play release Oct 2022, App Store Jan 2023.
- Directed the migration from Silicon Labs to Telink chipsets, cutting hardware costs by 30%.
- Built login-free sharing with Firebase and QR-based onboarding, removing passwords entirely.
- "Made in Lumens" award.

Graduate Trainee

Lumens Technologies · Aug 2021 – Apr 2022

- Researched communication protocols and adopted BLE Mesh for stable, low-internet connectivity in smart lighting.
- Built the first Plexilent prototypes for Android and iOS from scratch, working closely with the firmware team.
- Presented early product versions at industry exhibitions, securing B2B client interest.
- Designed UI/UX workflows and high-fidelity interfaces in Figma and Adobe XD.

Intern

Magenta ChargeGrid · Sep – Nov 2019

- Designed EV car-charging circuits and built a database of EV chargers across India.
- Negotiated spare parts and technology with suppliers in China.

SKILLS

iOS	Swift · Objective-C · Programmatic UI · iPad · Widgets · Siri Shortcuts · Xcode · CocoaPods
Android	Kotlin · Java · XML · Camera2 · Tablets · Widgets
Wearables	watchOS · Wear OS
Architecture	MVVM · MVP · Modular / white-label · CI/CD
APIs	REST · API design · Cloud Functions APIs · SDKs
Backend	Firebase RTDB · Cloud Functions · AWS Lambda · Python (PyPI) · Crashlytics · MySQL · ObjectBox
Design	Figma · Adobe XD · Lottie
Smart home	Alexa · Google Home · SmartThings · Home Assistant · IFTTT · Gemini AppFunctions
IoT & firmware	BLE / BLE Mesh · Wi-Fi · Matter · MQTT · Gateway firmware · Beacons · C / C++ · Arduino · Lighting control systems
Web	HTML · CSS · JavaScript · WordPress · SEO · Analytics · Social media
Tools	Git / GitHub · Xcode · Android Studio · Firebase Console
Security	Cybersecurity · Threat mitigation
Leadership	Team lead · Mentoring · Agile / Scrum · Project planning · Client & vendor negotiation

EDUCATION

2021	B.E. Electrical Engineering · Smt. Indira Gandhi College of Engineering
2018	Diploma, Electrical Engineering · K.J. Somaiya Polytechnic

CERTIFICATIONS

- ANIIT in Cloud & Mobile Software Engineering · NIIT (CGPA 9.0)
- Digital Transformation: Java Enterprise Apps with DevOps · NIIT
- Post Graduate Diploma in Industrial Automation · Prolific
- Arduino Programming and Hardware Fundamentals with Hackster · Udemy
